SUMMARY

I love exploring and learning about anything related to computing. Building reliable, robust, and accessible programs is a challenge that I enjoy tackling. I am always striving to learn more about computer systems and teach these concepts and ideas to others through blogs that I write. This extends to my passion for client interaction and helping in understanding what their problems are and how they can be solved.

SKILLS

Languages: Golang, JS/TS, React.js, Node.js, Alpine.js, HTMX, Zig, C#

Technologies: Unix and/or GNU/Linux, Git, Docker, AWS (Cognito, DynamoDB, Cloudwatch, Lambda, S3), GitHub Actions, OpenCode, ChatGPT, GitHub Copilot

EXPERIENCE

- 05/2022 - Current **Software Engineer II** **SSW**
I worked as a software consultant directly dealing with clients to identify problems, brainstorm solutions, and lead teams to solve said solutions using a variety of languages and technical stacks.
Westpac - I lead a small team to develop a React Native payments SDK. This involved writing Typescript/TSX and native device specific code (Kotlin & Swift). Jest and Maestro were used to develop UI and automated testing. Act was used to aid in the setup of GitHub actions locally. Additionally, I was the main contact for the client, facilitating many meetings to identify the problem space as well as continuous demos and feedback loops.
Xakia - I worked on improving the code quality and speed of Xakia's Gmail plugin written in JavaScript. This was done by improving the caching of API calls using Gmail's built-in caching service as well as better optimisation of data retrieved from API calls.
WardMM - I worked in a small team to migrate a .NET Framework 4.6.2 CLI to .NET Framework 4.8 to improve security issues. I wrote additional tests to ensure there were no regressions from the migration and no modifications were made to the backing Azure tables.
- 03/2024 - Current **Software Engineer II** **Tina.io**
As a core back-end team member at TinaCloud, I worked with Golang, Node.js, and AWS-based architecture to ensure site reliability for customers. I solved challenges related to authentication (Cognito), database storage and migrations (DynamoDB), and integrating external services seamlessly (GitHub). I provided customer support via Discord and GitHub discussions, helping users with TinaCMS-related issues.
- 08/2021 - 01/2023 **Private University IT tutor** **Freelance**
I privately tutored university students in a variety of languages and tech stacks.
- 03/2023 - 11/2023 **Software Developer** **TechnologyOne**
As part of my final year Capstone project, I lead a small team to build a roadside hazard detection system. I worked on the back-end Rust API and React Native mobile application. These services facilitated hazard detection and image manipulation-based operations to ensure hazards were properly outlined to users via the web and mobile applications.
- 07/2021 - 05/2022 **Junior Software Developer** **TestLab360**
I wrote front-end software for a cloud-based construction material management system. I also built MVP mobile applications using React Native.

EDUCATION

- 2021 - 2023 **Bachelor of Information Technology with a major in Computer Science** **Bachelors - University**
Graduated from QUT (Queensland University of Technology) with distinction - 6.7 GPA
- 2020 **ICT30115 Certificate III in Information, Digital Media and Technology** **TAFE**
Graduated from TAFE Queensland
- 2020 **Senior School Queensland Certificate of Education** **School**
Graduated from St Peter Claver College

VOLUNTEERING

- 2022 - Current **Open Source** **Freelance**
I have contributed back to open source projects I use through code contributions, bug reports, and related discussions. Some of which include Tangled, Bun, Zap, and the Leptos website
- 03/2022 - 11/2023 **STIMulate Peer Learning Facilitator** **QUT**
I supported university students undergoing their studies in a variety of languages and tech stacks.
